## EDUCATION

---

<b>Master of Science, Computer Engineering</b> <i>Arizona State University, Tempe, AZ</i>	May 2019 3.8 GPA
<b>Bachelor of Science, Computer &amp; Communications Engineering</b> <i>American University of Beirut, Lebanon</i>	June 2017 3.5 GPA
<b>Scholarship</b> <i>One of 200 scholarship recipients selected from 15,000+ applicants, on a need and merit basis, to pursue a Computer Engineering degree at Arizona State University</i>	2017-2019

## TECHNICAL SKILLS

---

Languages	Python, R, SQL, Java, C++
Software Tools	Docker, GitHub, Bash, d3.js, Tableau, Azure Machine Learning, AWS, Jupyter, AutoML, Snowflake, Databricks, Spark, Scala, Flask, Informatica
Machine Learning	Classification (Logistic Regression, SVM, Xgboost) and Regression (Linear, Ridge, LASSO), Survival Analysis, Reinforcement Learning, A/B testing
Relevant Courses	Statistical Machine Learning, Artificial Intelligence, Data Visualization, Big Data & Distributed Database Systems

## EXPERIENCE

---

<b>Data Scientist</b> <i>DriveTime</i>	June 2019 - Present Tempe, AZ
<ul style="list-style-type: none"><li>· Quantifying customer risk by building a proprietary credit-scoring model using credit bureau data</li><li>· Analyzing &amp; processing credit bureau data by assessing their efficacy &amp; model gain to make long-term decisions that improve the customers' experience</li><li>· Developing an end-to-end automated ML pipeline, that reduces the modeling cycle from 12 to 3 months (Python, Azure Machine Learning, AutoML, Azure DevOps, Docker, CI/CD)</li><li>· Producing a large portfolio of tutorials, coding practices &amp; guidelines used for training team members</li><li>· Coordinating across the organization to utilize deployed ML models to maximize ROI by collaborating with other analytical teams, data architects &amp; DevOps</li></ul>	
<b>Data Science Engineer &amp; BI Intern</b> <i>DriveTime</i>	June 2018 - May 2019 Tempe, AZ
<ul style="list-style-type: none"><li>· Built, tested &amp; deployed a regression model to rank-order vehicle depreciation to optimize buy strategies</li><li>· Played a key role in assessing the impact of vehicle depreciation, selection &amp; financing on customer risk</li><li>· Developed a monitoring pipeline that collects real-time scores, monitors model performance and through-the-door customer population shifts (R, SQL, SQL Server R services, Informatica)</li></ul>	

## PROJECTS

---

**Peer-to-peer lending risk model:** A logistic regression model that quantifies and predicts the probability of default within the first year on book (Python, Flask, Docker, Logistic Regression)

**Sarcasm Detection in Tweets:** A benchmark study comparing the performance of Naïve Bayes, SVM, Decision Trees and Logistic Regression on informal tweets for sentiment analysis (NLP)
